Rules-Based Fundamental Stock Selection ETF

Growth at a Reasonable Price (GARP) Index

Diversified U.S. Core Equity Exposure

Fund Description

The Barron's 400 ETF is based on the Barron's 400 Index. The equal weighted smart beta Index is composed of the highest-rated U.S. stocks based on bottom-up fundamental analysis from MarketGrader. The Index employs a growth at a reasonable price (GARP) methodology to identify financially sound companies across sectors and market cap segments that are likely to create significant shareholder value over the long-term. As such, the Index is designed to be a benchmark of capital appreciation in the U.S. equity asset class. The result is a diversified core U.S. equity portfolio that uses rules-based stock selection in seeking to outperform popular market cap weighted benchmarks over market cycles.

Weighting

The underlying Index is equal weighted. Upon semi-annual rebalance, each component comprises approximately .25% of the Index. Equal weighting prevents a small minority of companies from steering the entire index, giving smaller issues equal opportunity to contribute to overall performance.
